Roll No: 2024-SE-06

Course: Computer Networks

Course Code: SE-2203

Lab No: 01

Submitted To: Engr. Asma Javaid

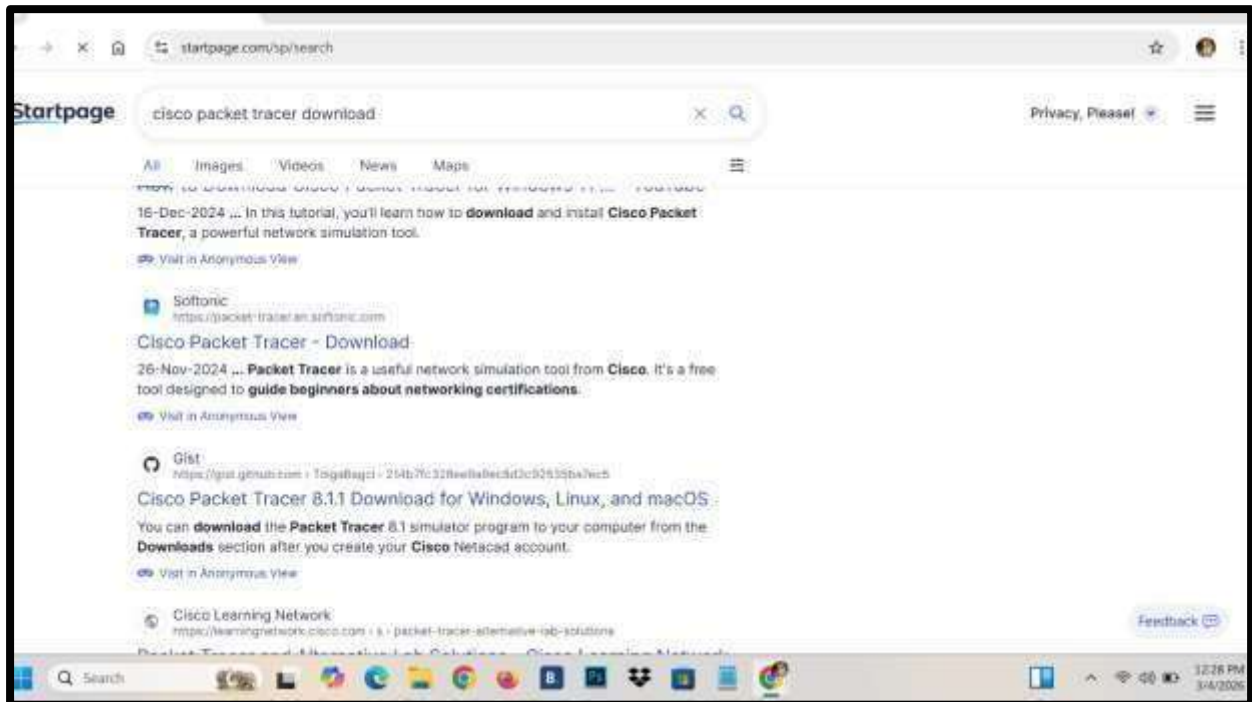

Department Of Software Engineering

Packet Tracer Installation

- **Step No: 01**

First Step to Download Cisco Packet Tracer :

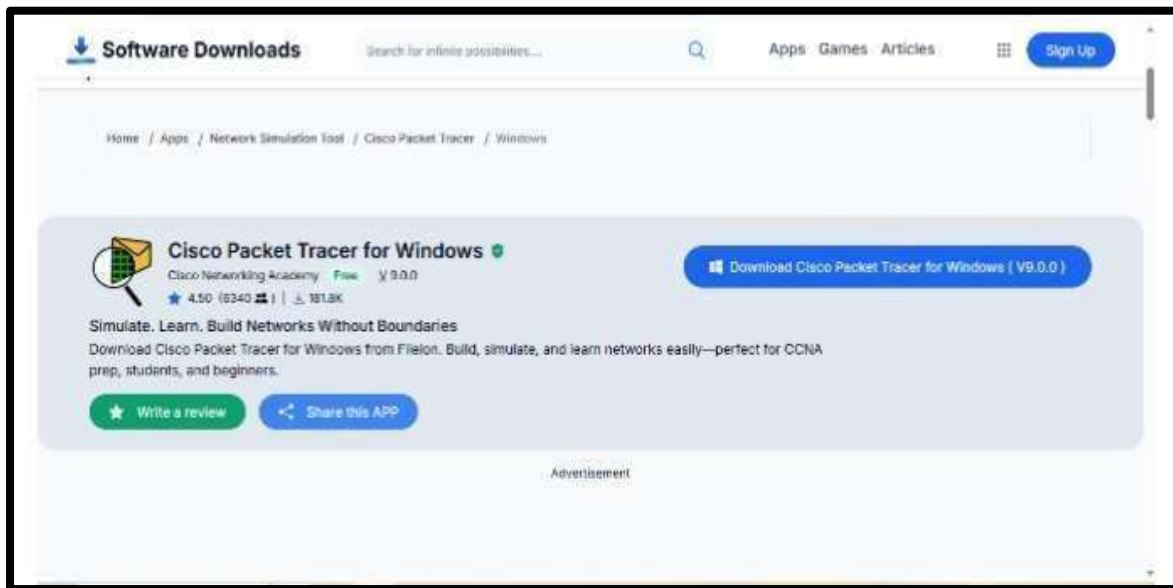

The first step is to search for Cisco Packet Tracer on Google, but make sure you download it from the official Cisco website

- **Step N0: 02**

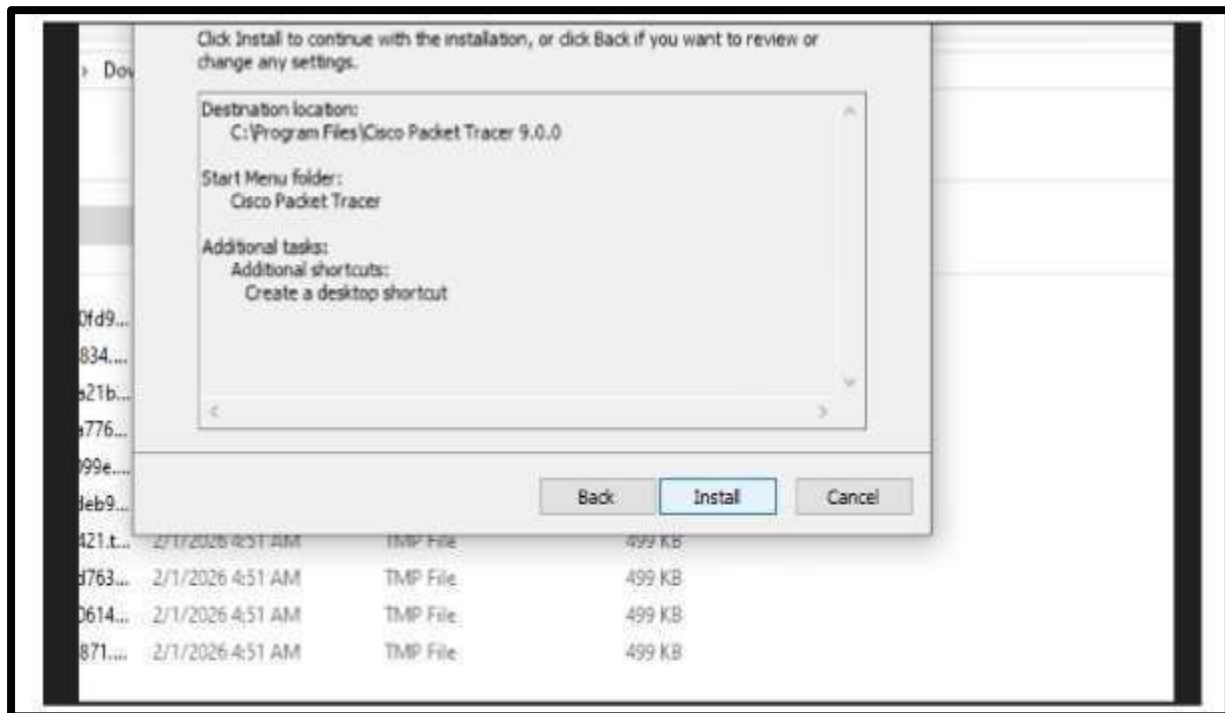

Downloading Cisco Packet Tracer:

In the second step, open your web browser and search for Cisco Packet Tracer for Windows. Go to the official website or a trusted source and click on the Download button. Make sure you select the correct version according to your operating system (Windows 64-bit). After clicking download, wait for the file to be saved on your computer. Once the download is complete, you are ready to install the software.

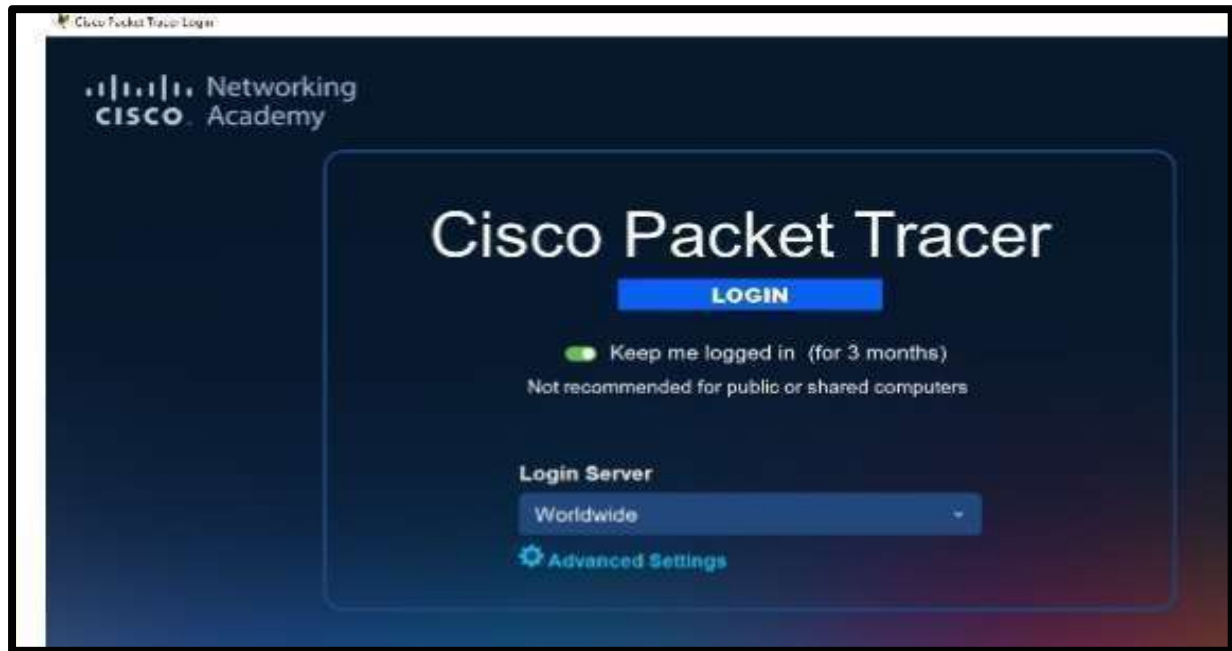

- **Step No: 03**

In this step, review the installation details such as the destination folder and Start Menu location. If everything is correct, click on the Install button to begin the installation process. Wait for the setup to complete. You can click Back to make changes or Cancel to stop the installation.

- **Step No: 04**

Create/Log in to your account: Since you are at a login screen, you must have a free Cisco account. If you don't have one, click the option to sign up.

- **Step N0: 05**

You are now on the main "Logical" workspace. You can start building your network by dragging and dropping devices from the bottom toolbar onto the grid.
